Skills

Technologies & Tools

- C#, .NET, Blazor
- HTML, CSS / SCSS, Javascript
- React
- Redux, Zustand
- SQL (MySQL, SQLServer, Postgres)
- Azure devops
- VSCode, Visual Studio
- Git, Github
- Postman
- Copilot, Cursor, Claude code

Principles & Patterns

- Object Oriented Programming
- Modular/Monolith architecture
- MVC architecture
- SOLID
- REST API's
- Maintainability & Readability
- Agile methodology: Scrum, Kanban, XP
- Unit testing & test driven development
- Database normalization

Experience

● **Dec. 2022 - Feb. 2026**

Softnotik Aps

Frontend-developer

- Took responsibility for core UI areas and contributed to fullstack solutions, designing and implementing features that simplified complex workflows and improved usability for real users.
- Developed and maintained user interfaces using React and CSS, while collaborating with backend services in .NET to ensure robust and scalable end to end solutions.
- Translated business requirements and stakeholder input into concrete features, balancing user needs with technical quality, maintainability and long term stability.
- Worked closely with cross functional team members to deliver features from concept to production, taking ownership of tasks and ensuring they met expectations for quality and reliability.
- Contributed to code quality through structured solutions, clear communication and a focus on writing code that is easy to understand, test and extend.

Education

● **Aug. 2023 - Feb. 2026**

UCN Aalborg

Computer science

- Built a strong foundation in object oriented programming using Java and C#, focusing on clean, maintainable code.
- Worked with modern development practices and frameworks, applying agile methodologies such as Scrum and Kanban in team-based projects.
- Designed and implemented software using structured architecture principles, including MVC, separation of concerns, and modular design.
- Collaborated in team projects with a focus on quality assurance, including unit testing, version control with Git, and code reviews.

Aug. 2021 - Mar. 2023

Techcollege Aalborg

Web development

- Developed frontend skills using HTML, CSS, and JavaScript, with a focus on building clean and responsive user interfaces.
- Built component based applications in React, emphasizing clean code, reusability, and maintainable structure.
- Applied fundamental UI/UX principles, including usability, visual hierarchy, and design consistency to improve user experience.

Projects

Fullstack note taking app

A task and note taking app inspired by OneNote, focusing on structure, user experience and scalable architecture.

The application is built as a fullstack app with separate front and backend.

- Design and implementation of component based frontend in React with zustand for state management.
- Responsive UI made with TailwindCSS.
- Development of REST API in .NET focusing on clear MVC architecture and Entity ORM connected to a Postgres database.
- Made a login system with authorization and encryption of user data.
- Statichost.eu is used for frontend hosting, render.com for backend and Supabase for hosting of the database.
